Reasons for Allowance

2. Regarding independent claims 2-4, 6-9, 12, 14, 16, 17, and 22-24, Naudus teaches a communication endpoint (fig. 1 box 40) for use in a network comprising: a controller configured to

handle call signaling during a media communication with another endpoint (fig. 1 box 80) via a gatekeeper or directly with another endpoint (col. 8 line 63 - col. 9 line 10).

Although Naudus teaches the controller is configured to maintain a database (col. 8 lines 63 - 67) for identifying multiple virtual domains (fig. 1 box 80: note other domains not shown) associated with a single gatekeeper, nothing in the prior art of reference teaches or fairly suggest the multiple virtual domains are created with a single gatekeeper based on a CDI.
